

Sustainability Performance Trends in Global Universities

Insights from UI GreenMetric World University Rankings
(2020–2022)

Rizno Fadhil

Why this analysis matter?

- UI GreenMetric evaluates universities' commitment to sustainability
- Participation has grown rapidly worldwide
- Understanding **score trends and indicator contributions** is important to:
 - Improve ranking methodology
 - Support fair benchmarking
 - Provide clear insights for universities and policymakers

What was analyzed?

- **Dataset:** UI GreenMetric Overall Rankings (2020–2022)
- **Indicators analyzed:**
 - Setting & Infrastructure
 - Energy & Climate Change
 - Waste
 - Water
 - Transportation
 - Education & Research
- **Methods:**
 - Trend analysis
 - Indicator contribution analysis
 - Correlation overview

Sustainability Scores Are Increasing

- Average total scores **increased each year** (2020–2022)
- Indicates:
 - Growing sustainability awareness
 - Better policies and reporting by universities
- Shows positive global progress toward sustainable campuses

Education & Research Dominates the Score, when Infrastructure Indicators Score Lower

- **Education & Research** has the highest average score, when **Water** and **Setting & Infrastructure** have the lowest average scores
- Suggests universities:
 - Focus strongly on sustainability courses and research
 - Can implement academic initiatives faster than infrastructure changes
- Possible reasons:
 - High costs of infrastructure improvements
 - Space and resource limitations
 - Longer implementation timelines

Sustainability Dimensions Are Connected

- Moderate to strong positive correlations between many indicators shows that improvements in one sustainability area often go **hand-in-hand** with improvements in others, implying a holistic approach to sustainability is common.

What This Means for UI GreenMetric

- Strong academic indicators may **dominate total scores**
- Infrastructure challenges may disadvantage some universities
- Rankings should:
 - Reflect diverse sustainability efforts
 - Remain fair across regions and income levels

Suggested Actions

- **Review indicator weighting regularly**
- **Support universities** in Water and Infrastructure sustainability
- **Improve transparency** in scoring and methodology
- **Use ranking insights** to guide sustainability policy and partnerships

Final Takeaway

- UI GreenMetric data shows **real progress** in global university sustainability
- Balanced indicators are essential for fair and meaningful rankings
- Data-driven insights can strengthen:
 - Ranking quality
 - University decision-making
 - Sustainability impact worldwide

Thank you.
